Errata for Quantum Mechanics
by Ernest Abers
Minor Errata and Cosmetic Corrections as of June 30, 2006

Chapter I

• Page 1, line 3: Change “observables or” to “observables are or”:

The superposition principle and the probability interpretation determine the mathematical framework of quantum mechanics. But, like Newton’s three laws of classical mechanics, these two ideas do not tell us what the observables are or how they
[Thanks to D. Auerbach, 10/12/2004]

• Page 5, top line: Replace “functional” with “function.”

thermodynamics. Think of $L$ as a function with $p$ instead of $\dot{q}$ as one of the
[Thanks to J. May, 10/11/2004]

• Page 6, just above Equation (1.131): Replace “one” by “once”

Differentiate once more
[Thanks to J. Schilling, 1/11/2005]

• Page 6, next to last line: Delete the repeated phrase “for isolated systems”:

For isolated physical systems, these transformations are all symmetries in the sense that when the coordinates undergo these transformations the form of the physical laws is unchanged.
[Thanks to J. May, 10/11/2004]

• Page 9, Equation (1.37): Change 1 to $I$:

$$\bar{R}(\hat{n}_z, \epsilon) = I + \begin{pmatrix} 0 & -\epsilon & 0 \\ \epsilon & 0 & 0 \\ 0 & 0 & 0 \end{pmatrix}$$

(1.36)

[10/06/2004]

• Page 9, footnote 6: Replace $R(\theta, \hat{n})$ by $R(\hat{n}, \theta)$ twice:

*I reserve the notation $\bar{R}(\hat{n}, \theta)$ for these real $3 \times 3$ matrices, to distinguish them from the abstract operation $R(\hat{n}, \theta)$ that appears in Tables 1.1 and 1.2.
[Thanks to E. Hemsing, 10/13/2004]

• Page 10, just above Equation (1.44): insert “are” before “components”:

Any three observables $V_i$ are components of a vector
[Thanks to J. Schilling, 1/11/2005]
• Page 15, Problem 1.2, part (d): Insert "m,“ after K.
   Compute $A^2$ in terms of $L^2$, $K$, $m$, and the energy $E$.
   [Thanks to J. May, 10/13/2004]

• Page 15, Problem 1.2, Part (e): In the next to last line, change “$\epsilon <= 1$” to “$\epsilon < 1$”:
   where $E$ is the total energy, and for a closed orbit, $E < 0$, $\epsilon < 1$.
   [Thanks to Y. Wang, 10/19/2005]

• Page 17, Problem 1.6, part (b), last line: Change “or” to “of”:
   in terms of the components of $A$ ($L$ is still the total angular momentum).
   [Thanks to D. Auerbach, 10/12/2004]

• Page 17, Problem 1.7, part (b), note: Delete "last."
   Note: This can be done in a page and a half, but it is easy to get lost;
   [Thanks to E. Hemsing, 10/13/2004]

Chapter II

• Page 22, line above Equation (2.3): Replace “pseudovector as” with “pseudovectors”:
   $\mu$ and $s$ are both pseudovectors, and parallel to each other:
   [Thanks to D. Auerbach, 10/18/2004]

• Page 25, above Equation (2.9): Change “an complex number” to “a complex number”:
   In wave mechanics one frequently has to calculate a complex number from two wave
   functions using a rule like
   [Thanks to J. May, 4/11/2005]

• Page 36, Equation (2.85): Replace $|x\rangle$ with $|\psi_x\rangle$. In Equation (2.91), replace $r$ with $\psi_r$:
   \[
   \int_{x_o}^{x_o+\Delta x} |\langle \psi | \psi_x \rangle|^2 dx
   \] (2.85)
   $\rho(r) = |\langle \psi_r | \psi \rangle|^2$ (2.91)
   [10/18/2004]

• Page 41, next to last line: Change the second “(2.118)” to “(2.119)”:
   This “demonstration” that $K = H$ solves equations (2.118) and (2.119) is not airtight.
   [Thanks to E. Hemsing, 5/29/2005]

• Page 42, Equation (2.125b): Change subscript $k$ to $i$:
   \[
   [q_j, p_i] = i\delta_{ij}
   \] (2.125a)
   [Thanks to J. May, 11/01/2004]
• Page 42, first full paragraph: change “as is classical mechanics” to “as in classical mechanics”:

then the time dependence of the expectation values of the observables is the same as in classical mechanics.
[Thanks to C. Clark, 10/24/2005]

• Page 42, Equation (2.126a), on the right: Change “ψ” to “|ψ⟩”:

\[
\frac{i\hbar}{dt} |\psi\rangle = H |\psi\rangle
\]  
(2.126a)

[Thanks to J. May, 4/11/2005]

• Page 43, second line in paragraph headed “Units”: Delete the word “equations”:

Why didn’t the dimensions come out right in equation (2.125)?
[Thanks to J. Schilling, 1/11/2005]

• Page 48, line 3: φ should be |φ⟩:

Let |φ⟩ = C|ψ⟩. Then the rule ⟨φ| φ⟩ ≥ 0 becomes
[10/17/2005]

• Page 48, last line: Insert “can be” before “measured”:

For a wave, the uncertainty principle is the limit on the precision to which both its location and frequency can be measured.
[Thanks to C. Clark, 10/24/2005]

• Page 50, just above Equation (2.183): Insert “to” before “first order”:

Comparing the terms on each side to first order in ϵ one obtains
[Thanks to C. Clark, 11/15/2005]

• Page 50, just above Equation (2.187), change “(2.183)” to “(2.181)”

To first order, from equation (2.181)
[Thanks to J. Ma, 10/27/2005]

• Page 50, footnote 13. Delete “the” before “similar”:

This is similar to the technique used in Section 2.4.1 for translations in time.
[Thanks to C. Clark, 10/24/2005]

• Page 52, last line of subsection 2.7.2: Change “become” to “becomes”:

For a Gaussian (and only for a Gaussian), the “≥” in the uncertainty principle becomes an equality.
[Thanks to C. Clark, 11/15/2005]
Page 52, third line of section 2.7.3: Change “(2.126b)” to “(2.126a)”: 

If the Hamiltonian is \( H = \frac{p^2}{2m} + V(x) \), then the general form (2.126a) of Schrödinger’s equation becomes 
[Thanks to J. Schilling, 1/11/2005]

Page 56 Problem 2.3. Change the value of \( \hbar \) from 1.054887 to 1.054572:

\[
\frac{h}{2\pi} = \hbar = 1.054572 \times 10^{-27} \text{ erg-seconds}
\]
[Thanks to A. Forrester, 10/19/2005]

Page 59, Problem 2.9, part (d): Delete the space between “i.e.” and the comma:

Then transform by direct substitution (i.e., using the chain rule for partial derivatives) 
[Thanks to S. A. Smith, 10/28/2005]

Chapter III

Page 62, second paragraph: This paragraph does not list the sections of chapter 3 in the correct order! 
[Thanks to J. Ma, 10/27/2005]

Page 75, Equation (3.80): Put an \( \hbar \) in front of the left-hand side:

\[
\hbar[\varepsilon_{ij}, L_j] = i\hbar \sum_k \varepsilon_{ijk} r_k
\]  
(3.80)
[Thanks to K. Lane, 1/12/2004]

Page 76, First line in the last paragraph of Section 3.3.2: Change “\( L_z \)” to “\( \mathcal{L}_z \)”: 

\( E \) will depend on the potential \( V(r) \); but the spectrum of \( \mathcal{L}^2 \) and \( \mathcal{L}_z \) follows from spherical symmetry alone. 
[Thanks to C. Clark, 11/15/2005]

Page 77, Line above Equation (3.97a): Change “the \( J_i \)” to \( J_z \):

The new combinations have these commutators with \( J_z \) and with each other:

[Thanks to J. Ma, 11/14/2005]

Page 78, Equation (3.104): In the first line delete the extra small closing bracket.

\[
J^2|j,j\rangle = \left( \frac{1}{2}(J_+ J_− + J_− J_+) + J_z^2 \right)|j,j\rangle = \left( \frac{1}{2}(J_+ J_− - J_− J_+) + J_z^2 \right)|j,j\rangle
\]  
(3.104)
[Thanks to J. Ma, 11/02/2005]
ERRATA

• Page 83, third line: Replace “that” by “than”:

Equation (3.127) is much simpler than equation (3.78): It is an ordinary
[Thanks to J. deGrassie, 11/03/2004]

• Page 83, line 4: Change “possible find” to “possible to find”:

If necessary it is possible
to find a numerical solution.
[Thanks to D. Stazsak, 12/15/2004]

• Page 85, line below Equation (3.142b): Change to “Computing (3.142b) is elementary, but it can get tedious (see problem 5.13).”
[Thanks to D. Matlock, 11/04/2004]

• Page 85, in the line below Equation (3.143): “(3.97b)” should be “(3.97a)”:

have the same energy. Why? From equation (3.97a)
[Thanks to D. Staszak, 12/15/2004]

• Page 89, Equation (3.164): In the first term, in the numerator, “d” should be “d²”:

\[
\frac{d^2}{dr^2} u(r) + \left( -\frac{Z^2}{(na)^2} - \frac{l(l+1)}{r^2} + \frac{2Z}{ar} \right) u(r) = 0 \tag{3.164}
\]
[Thanks to C. Clark, 11/15/2005]

• Page 96, Problem, 3.14, line 3: Change Mev to MeV:

If the range a is again the pion Compton wavelength (see Problem 3.12), what is the minimum value of V_o (in MeV) for which there is a bound state?
[Thanks to E. Hemsing, 11/03/2004]

• Page 97, Problem 3.14, part (b): Change “Mev” to “MeV”:

(b) What value for V_o is required for the energy of the bound state to be −2.22 MeV?
[Thanks to J. May, 4/11/2005]

Chapter IV

• Page 102, second paragraph, second sentence: Change “rotations or translations” to “rotations and translations”:

This and the next chapter are about symmetry transformations, especially rotations, in some detail. I will show that systems invariant under rotations and trans-
[Thanks to D. Staszk, 11/20/2004]
Since they commute, all the representation matrices $D(\hat{n}, \psi)$ about $\hat{n}$ also can be written in exponential form using a single real parameter.\footnote{Page 107: Footnote 5 should follow the sentence at the beginning of the paragraph that begins “Since they commute...”}

[Thanks to D. Staszak, 11/20/2004]

Page 109, Equation (4.31): On the left, and also in the second factor of the second expression, change outer parentheses to brackets:

$$D [\bar{R}(\hat{n}_x, \psi) \bar{R}(\hat{n}_y, \psi)] = D [\bar{R}(\hat{n}_x, \psi)] D [\bar{R}(\hat{n}_y, \psi)] = e^{-i\psi D(\hat{J}_x)} e^{-i\psi D(\hat{J}_y)}$$  \hspace{1cm} (4.31)

[Thanks to J. May, 4/11/2005]

Page 113, Equation (4.54): The first $r$ should be boldface:

$$\psi(r) - i\epsilon \sum_i n_i \langle r | J_i | \psi \rangle = \psi(r) - \epsilon \sum_{ijk} n_i \epsilon_{ijk} r_j \frac{\partial \psi}{\partial r_k}$$  \hspace{1cm} (4.54)

Page 116, Footnote 9, second line: Change “is” to “in”: with the rows and columns labeled by $m$ in decreasing order,

[Thanks to N. Kugland, 6/10/2006]

Page 117, Equation (4.78). Replace the second $\sigma_x$ by $\sigma_z$.

$$\sum_i \left( D^{(\frac{1}{2})}(J_i) \right)^2 = \frac{1}{4} \sigma_x^2 + \frac{1}{4} \sigma_y^2 + \frac{1}{4} \sigma_z^2 = \frac{3}{4} = \frac{1}{2} \left( \frac{1}{2} + 1 \right)$$  \hspace{1cm} (4.78)

[Thanks to F. O’Shea, 11/23/2005]

Page 117: The second displayed equation should be numbered in sequence. I have left it as it is, in order not to change the numbering of the following equations.

[12/09/2004]

Page 123, second line in footnote 14: Inside the last Dirac bracket, the dot should be a comma.

Another common notation is $|j_1, j_2; m_1, m_2\rangle$ and $|j_1, j_2; j, m\rangle$.

[Thanks to J. Champer, 12/07/2004]

Page 124: In Equations (4.117) and (4.119), there should be commas in the subscripts of all the kets for consistent notation.

"$$s_+ |\phi_{1,1}\rangle = \sqrt{s(s+1) - m(m-1)} |\phi_{1,0}\rangle = \sqrt{2} |\phi_{1,0}\rangle$$  \hspace{1cm} (4.117)"

$$|\phi_{1,0}\rangle = \frac{1}{\sqrt{2}} \left[ |\psi_{\frac{1}{2}, \frac{1}{2}}\rangle + |\psi_{-\frac{1}{2}, \frac{1}{2}}\rangle \right]$$  \hspace{1cm} (4.119)

[Thanks to J. Champer, 12/07/2004]
ERRATA

• Page 126, third paragraph, third line: change $1/2f$ to $1/2$:

  Unless $l = 0$, there are two states with $m = l - 1/2$. One linear combination will be in the $j = l + 1/2$ ladder. The remaining one must be the top of a new ladder, this time with $j = l - 1/2$. The number of states in these two ladders adds.

[Thanks to K. Lane, 1/12/2004]

• Page 128, bottom line: Delete one “can form”:

  $j_2$, and $j$ can form a triangle.

[Thanks to J. Champer, 12/07/2004]

Chapter V

• Page 139, in table 5.1, change $\nu_e$ in the neutron decay line to $\bar{\nu}_e$, and change $\nu$ in the $\pi^-$ decay line to $\bar{\nu}_\mu$.

<table>
<thead>
<tr>
<th>Particle Name (MeV/c^2)</th>
<th>Spin</th>
<th>Lifetime (seconds)</th>
<th>Decay Mode</th>
</tr>
</thead>
<tbody>
<tr>
<td>n</td>
<td>939.5653</td>
<td>h/2</td>
<td>n $\rightarrow$ p $+$ e$^-$ $+$ $\bar{\nu}_e$</td>
</tr>
<tr>
<td>...</td>
<td>...</td>
<td>...</td>
<td>...</td>
</tr>
<tr>
<td>$\pi^-$</td>
<td>139.570</td>

</tr>
</tbody>
</table>

[Thanks to A. Goodhue, 11/28/2005]

• Page 139, Table 5.1. Delete the comma after $\nu_e$ in the fourth line from the bottom:

[Thanks to Y. Guo, 3/16/2006]

• Page 139, first line of the last paragraph: Change “particle” to “particles”:

  What accounts for the huge range of lifetimes among the particles that do decay?

[Thanks to J. May, 4/11/2005]

• Page 139, bottom line of footnote 1, change the second “eV” to “eV^2”:

  Mass differences from interference experiments (see Section 6.3) are in the range $10^{-5}eV^2 \leq \Delta m^2 \leq 10^{-3}eV^2$.

[Thanks to Y. Guo, 1/23/2006]
Quantum Mechanics

• Page 142, just below Equation (5.17d), change “5.17a” to “5.17”. And again on Page 143, at the end of the second full paragraph:

The peculiar signs and phases in the definitions (5.16) were chosen so that (5.17) can be summarized.....

...by inserting commutators $[J_\pm, V^q]$ and $[J_z, V^q]$ between the states and using the identities(5.17).
[12/31/2004]

• Page 144, in the line below Equation (5.35), change $\hbar^2$ to $\hbar$:

$x_ip_j + \hbar L_is_j$ is also a rank-two Cartesian tensor.
[Thanks to Y. Guo, 1/23/2006]

• Page 145, in the paragraph above Equation (5.39) delete “symmetry property”. Later in the same paragraph delete “using the orthogonality of the matrices $R$”. In the fourth line from the bottom, replace $T_{ij} - T_{ji}$ with $T_{jk} - T_{kj}$:

A symmetric or antisymmetric tensor preserves that property under rotations. For instance, if $T_{ij} = \pm T_{ji}$, then it is simple to show (Problem 5.3) that ....... a fact made explicit by writing $V_i = \sum_{jk} \epsilon_{ijk}(T_{jk} - T_{kj})$.
[Thanks to Y. Guo, 1/23/2006]

• Page 148, last line above the footnote. Replace $T^q_\kappa$ with $\langle \alpha', j', m' | T^q_\kappa | \alpha, j, m \rangle$:

Therefore, $\langle \alpha', j', m' | T^q_\kappa | \alpha, j, m \rangle = 0$ unless $m' = m + q$.
[Thanks to Y. Guo, 1/23/2006]

• Page 149, on the line just below Equation (5.58): Change $\kappa$ to $q$. And in Equation (5.61) for consistency with the notation elsewhere, the subscripts should precede ($\vec{R}$):

and that the proportionality constant is independent of $m'$, $m$, and $q$.
[Thanks to Y. Guo, 1/23/2006]

• Page 150, Equation (5.64): For consistency with the notation elsewhere, the subscripts should precede ($\vec{R}$):

$$R(\vec{R})|\alpha, j_1, m_1, j_2, m_2\rangle = \sum_{m'_1, m'_2} |\alpha, j'_1, m'_1, j'_2, m'_2\rangle D^{(j_1)}_{m'_1 m_1} (\vec{R}) D^{(j_2)}_{m'_2 m_2} (\vec{R}) (5.64)$$
[Thanks to Y. Guo, 1/23/2006]

• Page 158, fifth paragraph, sixth line, delete one occurrence of the word “systems”:

There is a general rule, arbitrary in nonrelativistic quantum mechanics, that all half-integral spin systems are fermions and all integral spin systems are bosons.
[Thanks to Y. Guo, 3/16/2006]
ERRATA

• Page 158, Equation (5.112): Insert a comma between $j_1$ and $m_1$:

$$|\psi\rangle = |E_{1, l_1, j_1, m_1, E_{1, l_1, j_1, m_1}\rangle$$ (5.112)

[Thanks to C. Clark, 3/17/2006]

• Page 161, Equation (5.123): Divide the exponent by $\hbar$:

$$U(t_f, t_i) = e^{-iH(t_f-t_i)/\hbar}$$ (5.123)

[Thanks to K. Lane, 1/12/2004]

Chapter VI

• Page 171, Last paragraph, second line: Insert a space between “volt” and “(eV)”: If you need the security of imagining that our equations are written with some underlying unit in mind, take that unit to be the electron volt (eV), the magnitude of the energy acquired by an electron moving through a potential difference of one volt... [1/09/2006]

• Page 172, Equation (6.6): “$A'(r)$” should read “$A'(r)$”:

$$\frac{1}{2m} \left[ -i\nabla + e A'(r) \right]^2 e^{-ieA(r)} \psi(r) = E e^{-ieA(r)} \psi(r)$$ (6.6)

[1/09/2006]

• Page 179, Equation (6.48): Enclose “$\rho P_a$” in parentheses:

$$\frac{1}{N} \sum_i |\langle \psi_i | \phi_a \rangle|^2 = \text{Tr} \left( \rho P_a \right)$$ (6.48)

[Thanks to Y. Guo, 1/24/2006]

• Page 183, next-to-last line of the top paragraph, change “What it” to “What is”: What is the probability for finding the electron in the upper state at a later time? [Thanks to J. May, 4/11/2005]

• Page 183, second line below Equation (6.84): Change “is has” to “has”; Just above Equation (6.87) change “are” to “satisfy”; and in Equation (6.87), after the first equals sign, change $\sum_k$ to $\sum_{jk}$:

In the rotating frame $H'$ has constant components:

Therefore the components of $P$ in the rotating frame satisfy

$$\frac{d}{dt} \left[ P \cdot \dot{\mathbf{n}}_i(t) \right] = \sum_{jk} \epsilon_{ijk} H'_j P'_k - \sum_k \epsilon_{ijk} \omega_j P'_k$$ (6.87)

[1/15/2005]
• Page 183, Equation (6.87): The subscript in the last term should be \(jk\):

\[
\frac{d}{dt} \left[ P \cdot \hat{n}'_i(t) \right] = \sum_{jk} \epsilon_{ijk} H'_j P'_k - \sum_{jk} \epsilon_{ijk} \omega_j P'_k
\]  
(6.87)

[Thanks to Y. Guo, 1/23/2006]

• Page 186, third paragraph in Section 6.3.2, end of first sentence: Change “types of neutrino” to “neutrino types” and add a space at the end of the sentence.

To keep the problem simple, I will imagine there are just two neutrino types. This is enough to exhibit the essential features of what is

[Thanks to E Osoba and L. Fredrickson, 1/24/2005]

• Page 187, just above Equation (6.103): Change \(|\mu\tau\rangle\) to \(|\nu\tau\rangle\):

In the basis \(|\nu_\mu\rangle\) and \(|\nu_\tau\rangle\) of states with definite interaction properties the

[Thanks to D. Matlock, 1/24/2005]

• Page 189, at the end of the first paragraph, add a period.

all the \(\nu_e\) type and their energies are a few MeV.

[1/27/2005]

• Page 199, Problem 6.7, First line of part (a): Delete the second “also”:

First let there also be a small constant magnetic field along the \(x\)-axis

[Thanks to A. Forrester, 2/08/2006]

• Page 199, Problem 6.7, part (b): In the first line, change “also” to “instead”, and in the second line change “the magnetic field” to “the total magnetic field.” Then in the equation on the right-hand side change “\(B = B_1\)” to “\(B = B_\nu \hat{n}_z + B_1\)”:

Now let there be a circularly polarized electromagnetic wave instead, such that the total magnetic field at the location of the electron is

\[
B = B_\nu \hat{n}_z + B_1 (\hat{n}_x \cos \omega t + \hat{n}_y \sin \omega t)
\]

[1/23/2005]

Chapter VII

• Page 203, just above Equation (7.7): Change “is” to “in”:

\(H'_{mn}\) are the matrix elements of \(H'\) in the \(|\psi_n^\prime\rangle\) basis:

[Thanks to A. Young, 2/08/2005]
ERRATA

- Page 203, Equation (7.8): In the first line change $E_n^o$ to $E_n^o$ (twice):

\[
(H - E_n^o + E_n^o - H_o) |\psi_n\rangle = H'|\psi_n\rangle
\]

\[
(H_o - E_n^o) |\psi_n\rangle = (\Delta_n - H') |\psi_n\rangle
\]

(7.8)

[Thanks to K. Lane, 3/19/2004]

- Page 203, in the line below Equation (7.9), delete one “i” in “satisfies”:

The proof that equation (7.9) satisfies equation (7.8) is brief:

[Thanks to N. Kugland, 2/13/2006]

- Page 204, Equation (7.16), delete the + sign and the dots at the end of the equation:

\[
\Delta_n^1 + \Delta_n^2 = H_{nn}' - \sum_{m \neq n}^\infty \frac{|H_{mn}'|^2}{E_m - E_n^o}
\]

(7.16)

[Thanks to A. Forrester, 2/01/2006]

- Page 205, second bulleted paragraph, seventh line: Change “so” to “but”:

Two states in one of these ladders will have the same unperturbed energy, but we

[Thanks to K. Lane, 3/19/2004]

- Page 206, below Equation (7.26), replace $\lambda/m\omega$ with $\lambda/m\omega^2$:

Expand $\omega'$ in powers of $\lambda/m\omega^2$:

[Thanks to J. Wright, 2/07/2006]

- Page 207, in the second line of the paragraph that begins “The way to get around....”:

Change “to completely” to “to be completely”:

$H'$ does not have to be completely diagonal.

[Thanks to J. May, 4/11/2005]

- Page 208, Equation (7.38), the first and last terms replace $\mp$ with $\pm$:

\[
\pm \Delta = \langle \psi_\pm | H' | \psi_\pm \rangle = \pm eE \langle 210 | z | 200 \rangle
\]

(7.38)

[Thanks to Y. Guo, 3/16/2006]

- Page 210, Equation (7.47): The lower limit on the last sum in the first line should be 2, not 1.

\[
\Delta^{(2)} \geq e^2E^2 \sum_{n=2}^\infty \frac{|^\langle n10 | z | 100 \rangle|^2}{E_1 - E_2} = \frac{e^2E^2}{E_1 - E_2} \sum_{n=2}^\infty \frac{|^\langle n10 | z | 100 \rangle|^2}{E_1 - E_2}
\]

(7.27)

[Thanks to X. Xiao, 3/13/2006]
• Pg 210, second line of “Exact Solution,” there should be a space after footnote 2. Since
the typesetter doesn’t like to do this, move the footnote to the end of the paragraph:

Amazingly, it is possible to sum the series in (7.45) and compute the polarizability
exactly. I cannot resist presenting this result here briefly, even though the method is
not generalizable to a very wide class of problems.\footnote{J. Champer, 2/16/2005}

• Page 210, Footnote 3: Replace “(7.19)” with “(7.20)”:

We also need the normalization condition (7.20), which here reads
\[ \text{[Thanks to Y. Guo, 3/16/2006]} \]

• Page 213, line 3: Delete “is”:

The magnetic field of a point charge \( q \) moving with velocity \( \mathbf{u} \) can be
obtained from the Biot-Savart law.
\[ \text{[Thanks to D. Stazsak, 2/25/2005]} \]

• Page 214, Equations (7.69) and (7.70): Change the subscript “3” to “D”:

\[
H_D = -\frac{1}{8m^2} \nabla^2 V(r) \tag{7.69}
\]

\[
E_D = \frac{\alpha^4 m}{2n^3} \delta_{l0} \tag{7.70}
\]

\[ \text{[Thanks to K. Lane, 3/19/2004]} \]

• Page 215: In the top line delete “for any \( l \)”:

Therefore, we can write the sum of the spin-orbit energy...
\[ \text{[Thanks to J. May, 4/11/2005]} \]

• Page 218: Equation (7.89) should be three equation numbers:

\[
2S_{\frac{1}{2}} : \quad E = -\frac{\alpha^2 m}{8} - \frac{5\alpha^4 m}{128} + 2m_j \mu_B B \tag{7.89a}
\]

\[
2P_{\frac{1}{2}} : \quad E = -\frac{\alpha^2 m}{8} - \frac{5\alpha^4 m}{128} + \frac{2}{3} m_j \mu_B B \tag{7.89b}
\]

\[
2P_{\frac{3}{2}} : \quad E = -\frac{\alpha^2 m}{8} - \frac{\alpha^4 m}{128} + \frac{4}{3} m_j \mu_B B \tag{7.89c}
\]

\[ \text{[Thanks to J. Champer, 2/28/2005]} \]

• Page 218, in the second paragraph of subsection 7.3.6: Replace “\( \mu_p \)” with “\( \mu_N \)”:

Its gyromagnetic ratio (measured, for example, in nuclear magnetic resonance experi-
ments) is about \( 2 \times 2.793 \), and \( \mu_N = e/2M \).
\[ \text{[Thanks to L. Fredrickson, 2/07/2005]} \]
ERRATA

• Page 220, Equation (7.105): In the first line, omit “2Δ_{HFS}”. In the second line change “= 5.85009” to “≈ 5.89”:

\[ \Delta = \frac{2}{3} \times \frac{1}{137.036^3} \times \frac{1}{1836} \times 2 \times 2 \times 2.78 \times 511,000 \text{ eV} \]
\[ \approx 5.9 \times 10^{-6} \text{ eV} \] (7.105)

[Thanks to D. Matlock, 7/30/2005]

• Page 222, Table 7.1: The table should include a third column, identical to the third column in Table 7.2.

[3/16/2006]

• Page 320, diagram (a): The neutrino should not have a positive charge.
[Thanks to D. Staszak, 6/11/2005]

• Page 321, Problem 9.8, sixth line on the page: insert “angular” before momentum of the neutrino”:

The angular momentum of the positron is fixed by the angular momentum of the neutrino.
[Thanks to A. Tableman, 5/17/2006]

• Page 321, Problem 9.8, Part (a), in the second line of the first equation: The superscript 2 should be to the right of the large vertical bar.

$$\times |\langle \pi^0(\text{at rest}); \mathbf{k}; \mathbf{q} | H_W | \pi^+ (\text{at rest}) \rangle|^2 d^3k d^3q$$
[Thanks to E. Hemsing, 4/18/2005]

• Page 321, Problem 9.8, Part (c). Change “proportional to $m_e$” to “for small $m_e$”:

Can you estimate the error for small $m_e$?
[5/03/2006]

• Page 321, Problem 9.8, third line of Part (d): Replace “that” with “than”:

If you did the computation correctly, you found a rate for $\pi^+ \beta$-decay orders of magnitude smaller than the rate for the two-body decay...
[Thanks to D. Matlock, 5/16/2005]

• Page 322, Problem 9.9, in the second line, delete the space after $\pi^+$, and in the fifth line of part (a), change “that” to “than”:

is similar to the $\beta$-decay of a $\pi^+$.
.....
ERRATA

(much smaller than \(m_e\))
\[\text{[Thanks to A. Tableman, 5/17/2006]}\]

- Page 322, Problem 9.9, second paragraph: In the last sentence, change “positron and neutrino” to “electron and antineutrino”:

\[k\] and \(q\) are the final state electron and antineutrino momenta.
\[\text{[Thanks to L. Fredrickson, 5/10/2005]}\]

- Page 323, Problem 9.10, Part (c), in the displayed equation, the subscript \(n\) should be boldface with a hat:

\[
F(\hat{n})(\sigma_{\hat{n}}) = (\alpha + P \cdot \hat{n}) \hat{n} + \beta P \times \hat{n} + \gamma \hat{n} \times (P \times \hat{n})
\]
\[\text{[6/09/2006]}\]

Chapter X

- Page 325, Equation (10.12), in the second and fourth expressions: “\(dp\)” should be outside the brackets:

\[
\left\langle q_n \right| e^{-iH(t_n-t_{n-1})} \left| q_{n-1} \right\rangle = \frac{1}{2\pi} \int e^{i\rho(q_n-q_{n-1})} \left[ 1 - i\epsilon H(p,q_n) \right] dp
\]
\[
\approx \frac{1}{2\pi} \int e^{i\rho(q_n-q_{n+1})} e^{-i\epsilon H(p,q_n)} dp = \frac{1}{2\pi} \int \exp \left( i\epsilon [p \hat{q}_n - H(p,q_n)] \right) dp \quad (10.12)
\]
\[\text{[Thanks to N. Robles, 1/22/2005]}\]

- Page 325, Equation (10.12), in the exponent of the first term on the second line, change \(q_{n+1}\) to \(q_{n-1}\):

\[
\approx \frac{1}{2\pi} \int e^{i\rho(q_n-q_{n-1})} e^{-i\epsilon H(p,q_n)} dp = \frac{1}{2\pi} \int \exp \left( i\epsilon [p \hat{q}_n - H(p,q_n)] \right) dp \quad (10.12)
\]
\[\text{[Thanks to Y. Guo, 5/22/2006]}\]

- Page 326, just below Equation (10.15), there is a closing bracket missing before “when”. Then in the paragraph beginning “The derivation of the path integral”, in the fourth line, delete the first “with”. And finally, in Equation (10.17), on the left, inside the exponential, put an \(\epsilon\) before \(p_n^2/2m\):

Inside the integral you have to remember the factor \(\Theta(t_b-t_a) \exp[-\eta(t_b-t_a)]\) when needed......

The commutators generate new terms with fewer factors...

\[
\int dp_n \exp \left( i\epsilon p_n \hat{q}_n - i\frac{p_n^2}{2m} \right) = \sqrt{\frac{2m\pi}{i\epsilon}} \exp \left( \frac{i\epsilon m\hat{q}^2}{2} \right) \quad (10.17)
\]
\[\text{[Thanks to D. Staszac, 11/21/2005]}\]
• Page 327, Equation (10.23): “$dt$” is missing in the last integral:

$$S[q] = S[q_o] + \frac{1}{2} \int_{t_a}^{t_b} \frac{\partial^2 L(\dot{q}_o)}{\partial q^2} \delta(\dot{q})^2 dt$$  \hspace{1cm} (10.23)$$

[Thanks to N. Robles, 1/30/2005]

• Page 328, Equation (10.28), in the first line change $\dot{q}$ to $\dot{q}_n$:

$$I_N = \int \prod_{n=1}^{N} dq_n \exp \left( i \frac{\sum_{n=1}^{N+1} m q_n^2}{2} \right)$$  \hspace{1cm} (10.28)$$

[Thanks to Y. Guo, 5/22/2006]

• Page 333, Equation (10.66): At the end, $dw$ should be inside the parenthesis.

$$K_E(q_b, T; q_a, 0) = \sum_n \psi_n(q_a) \psi_n(q_b)^* e^{-E_n T} = \int Dq \exp \left( - \int L_E[q(w)] dw \right)$$  \hspace{1cm} (10.66)$$

[Thanks to Y. Guo, 5/22/2006]

• Page 335, Equation (10.77) in the line that begins with “×”: Insert an integral sign before the large product symbol:

$$\times \int dq_k V(q_k) \left( \frac{m}{2 \pi i \epsilon} \right)^{(N+1-k)/2} \int dq_j \exp \left[ i \epsilon \sum_{n=k+1}^{N} \left( \frac{m q_n^2}{2} \right) \right]$$

[Thanks to N. Robles, 1/30/2005]

• Page 336, in the paragraph below Equation (10.81), sixth line, should read "freely from $q_a, 0$ to $q_b, t_b$. Or it can propagate from $q_1, t_1$ to $q_b, t_b$:

The particle may propagate freely from $q_a, 0$ to $q_b, t_b$. Or it can propagate from $q_1, t_1$ to $q_b, t_b$.

[Thanks to Y. Guo, 5/22/2006]

• Page 338, first paragraph of section 10.2.3, in the third line, change $z$ to $x$:

There are two small holes in the plane, on the $x$ axis at $x = \pm d/2$.

[Thanks to Y. Guo, 5/22/2006]

• Page 339, Equation (10.95) change $t_z$ to $t_a$.

$$\psi(r_b, t_b) = \int d^3 r_a \int Dr K(r_b, t_b; r_a, t_a) e^{iS}\psi(r_a)$$  \hspace{1cm} (10.95)$$

[Thanks to Y. Guo, 5/22/2006]
• Page 343, Equation (10.115): the symbols $\psi_{\pm}(\phi)$ should be enclosed in Dirac brackets.

$$|\psi_{+}(\phi)\rangle = \begin{pmatrix} \cos \frac{\theta}{2} \\ \sin \frac{\theta}{2} e^{i\phi} \end{pmatrix} \quad \text{and} \quad |\psi_{-}(\phi)\rangle = \begin{pmatrix} \sin \frac{\theta}{2} \\ -\cos \frac{\theta}{2} e^{i\phi} \end{pmatrix}$$ (10.115)

[6/07/2006]

• Page 344, Equation (10.124): insert an $i$ before the integral sign on the second line:

$$= i \int_{0}^{2\pi} \langle \psi_{-}(\phi) | \psi'_{-}(\phi) \rangle d\phi = -\pi (1 + \cos \theta)$$ (10.124)

[Thanks to Y. Guo, 5/23/2006]

• Page 345, in Equation (10.130), delete the $i$, and in Equation (10.131), replace $R$ with $dR$:

$$\gamma(t) = \int_{R(0)}^{R(t)} A(R) \cdot dR$$ (10.130)

$$......$$

$$\gamma(t) = \int_{C} A(R) \cdot dR = \int \nabla \times A \cdot dS$$ (10.131)

[Thanks to Y. Guo and J. Ma, 5/23/2006]

• Page 355, Reference [14]: Change Tycho to Tycko, here and in the index.

Chapter XI

• Page 358, Equation (11.13a): The letter $t$ and the superscript 2 should not be boldface:

$$\ddot{Q}(k, t) + \omega^2 Q(k, t) = 0$$ (11.13a)

[Thanks to J. May, 6/14/2005]

• Page 359: In Equation (11.21), change “$\hat{\varepsilon}_\alpha(k, t)$” to “$\hat{\varepsilon}_\alpha(k)$”; and in Equation (11.23) in the first line, omit the multiplication sign after $\omega$:

$$c(k, t) = \sum_{\alpha=1}^{2} \hat{\varepsilon}_\alpha(k) c_{\alpha}(k, t)$$ (11.21)

$$......$$

$$\dot{A} = -\frac{i}{(2\pi)^{3}} \sum_{\alpha} \int \omega \left[ \hat{\varepsilon}_\alpha(k) c_{\alpha}(k, t) e^{ik \cdot r} - \hat{\varepsilon}_\alpha(k)^* c_{\alpha}(k, t)^* e^{-ik \cdot r} \right] d^{3}k$$ (11.23)

[4/06/2005]
• Page 360, just above Equation (11.25a): The \( t \) in \( \dot{A}(r, t) \) should not be boldface:

The Fourier transform of the electric field \( E(r, t) = -\dot{A}(r, t) \) is

[Thanks to J. May, 6/14/2005]

• Page 360, Equation (11.26b): The closing bracket should be before the exponential:

\[
    = -\left( \frac{i}{2\pi} \right)^{1/2} \int \omega \hat{n} \times [c(k, t)^* + c(-k, t)] e^{-ik \cdot r} d^3k \tag{11.26b}
\]

[Thanks to D. Staszak, 4/24/2005]

• Page 361, Equation (11.30), in the first line, change the first \( "c" \) to boldface.

\[
    H = \frac{1}{4\pi} \int \omega^2 \left( c(k, t) \cdot c^*(k, t) + c^*(k, t) \cdot c(k, t) \right) d^3k \tag{11.30}
\]

[Thanks to N. Kugland, 4/17/2006]

• Page 364, just above Equation (11.52): There should be a space between “vector” and “\( \hat{\epsilon}(k) \)”:

with momentum \( k \) and polarization vector \( \hat{\epsilon}(k) \).

[Thanks to D. Staszak, 6/11/2005]

• Page 365, Equations (11.57) and (11.58): In both equations change 4\( \pi i \) to 4\( \pi \).

\[
    E(r, t) = -\frac{\partial A}{\partial t} = \frac{(4\pi)^{1/2}}{(2\pi)^{3/2}} \int \frac{1}{\sqrt{2\omega}} \omega \nabla \times \left[ a(k, t) - a^\dagger(-k, t) \right] e^{ik \cdot r} d^3k \tag{11.57}
\]

and

\[
    B(r, t) = \nabla \times A = -\frac{(4\pi)^{1/2}}{(2\pi)^{3/2}} i \int \frac{1}{\sqrt{2\omega}} \omega \nabla \times \left[ a(-k, t) + a^\dagger(k, t) \right] e^{-ik \cdot r} d^3k \tag{11.58}
\]

[Thanks to M. Santonocito, 3/30/2004]

• Page 366, just above Equation (11.60): There should be a period after “vanishes”:

The last two terms are odd under this substitution, so the integral over them vanishes. Thus

[Thanks to D. Staszak, 6/11/2005]

• Page 367, just above Equation (11.66): Change “(11.58)” to “(11 45)”:

From equations (11.57), (11.45), and (11.65).

[Thanks to D. Staszak, 6/11/2005]

• Page 371, Equation (11.86), first line: Replace \( \delta (k' - k) \) with \( \delta_3 (k' - k) \):

\[
    H'_f = \frac{e}{m} \sqrt{\frac{4\pi}{(2\pi)^{3/2}}} \sum_{\alpha'} \int \langle \psi_f \mid \hat{\epsilon}_{\alpha'}(k') \cdot pe^{-ik' \cdot r} \mid \psi_i \rangle \frac{1}{\sqrt{2\omega'}} \delta_{\alpha', \alpha} \delta_3 (k' - k) d^3k' \tag{11.86}
\]

[Thanks to J. May, 6/14/2005]

\phi(\mathbf{p}) = \frac{1}{(2\pi)^{3/2}} \int \psi(\mathbf{r}) e^{-i\mathbf{p} \cdot \mathbf{r}} d^3r
\]

[Thanks to J. Champer, 6/02/2005]

• Page 440, Equation (13.20): In the next-to-last expression, change \( \mathbf{r}' \) to \( \mathbf{r} \):

\[
[a_i, a_j^\dagger] = \int \int \psi_i^\dagger(\mathbf{r}') \psi_j(\mathbf{r}) [\Psi(\mathbf{r}'), \Psi(\mathbf{r})] d^3r' d^3r = \int \psi_i^\dagger(\mathbf{r}) \psi_j(\mathbf{r}) d^3r = \delta_{ij}
\]

[5/18/2005]

• Page 441, Equation (13.25): In the first row, change \( a^\dagger(\mathbf{p}) \) to \( a^\dagger(\mathbf{p}') \):

\[
H = \frac{1}{2m} \int \mathbf{p}' \cdot \mathbf{p} a^\dagger(\mathbf{p}') a(\mathbf{p}) \delta_3(\mathbf{p}' - \mathbf{p}) d^3p d^3p'
\]

[5/17/2006]

• Page 441, Equation (13.28): In the last term, replace \( v \) with \( v_2 \):

\[
H = \frac{1}{2m} \int \nabla \Psi^\dagger(\mathbf{r}) \cdot \nabla \Psi(\mathbf{r}) d^3r
+ \frac{1}{2} \int v_2(\mathbf{r}_1, \mathbf{r}_2) \Psi^\dagger(\mathbf{r}_1) \Psi(\mathbf{r}_1) \Psi^\dagger(\mathbf{r}_2) \Psi(\mathbf{r}_2) d^3r_1 d^3r_2
\]

[Thanks to T. Tao, 5/26/2005]
Page 441, (Equation 13.30) and Page 442, Equation (13.31): In the denominators, change "$\pi$" to the Greek letter "$\pi$":

\[ \Psi(r, t) = \frac{1}{(2\pi)^{3/2}} \int e^{ip \cdot r} a(p, t) d^3p = \frac{1}{(2\pi)^{3/2}} \int e^{ip \cdot r} a(p) e^{-i\omega t} d^3p \quad (13.30) \]

The field satisfies an equation of motion:

\[ i \frac{\partial \Psi(r, t)}{\partial t} = \frac{1}{(2\pi)^{3/2}} \int \frac{p^2}{2m} e^{ip \cdot r} a(p) e^{-i\omega t} d^3p = -\nabla^2 \Psi(r, t) \quad (13.31) \]

[5/18/2005]

Page 442, Equation (13.37): Change "$\pi\pi$" to the Greek letter $\pi$:

\[ \Psi_s(r) = \frac{1}{(2\pi)^{3/2}} \int V_s(p) e^{ip \cdot r} a_s(p) d^3p \quad (13.37) \]

[Thanks to J. Champer, 6/02/2005]

Page 452, just above the subheading “Neutron Stars”: Change the period after $g$ to a comma:

gives the critical mass, called the Chandrasekhar limit [1,2], as about $2.4 \times 10^{33} \text{ g}$, or 1.4 times the mass of the sun.

[Thanks to J. May, 6/14/2005]

Page 455, Equation (13.121): Change $r$ to $k$ (four times)

\[ [a(k'), a^\dagger(k)] = \delta_3 (k' - k) \quad (13.121) \]

[6/02/2005]

Page 457, Equation (13.131): In the middle expression, in the denominator, $\phi$ should be $\dot{\phi}$:

\[ \Pi(x) = \frac{\partial L}{\partial \dot{\phi}(x)} = \dot{\phi}^\dagger \quad (13.131) \]

[Thanks to J. Wright, 6/06/2006]

Page 458, second full paragraph: Change the second $d^\dagger$ to $b^\dagger$:

The particles created by $d^\dagger(k)$ are the antiparticles of the ones created by $b^\dagger(k)$.

[Thanks to E. Hemsing and D. Matlock, 6/01/2005]

Page 459, Equation (3.154). Change the subscript $i$ to $s$:

\[ \psi(x) = w_s(k, t)e^{ik \cdot r} = w_s(k)e^{i(k \cdot r - E t)} \quad (13.154) \]

[5/31/2006]
• Page 460, Equations (13.155) and (13.161): in the first factor on the left, \( pi \) should be Greek letter \( \pi \):

\[
\psi(x) = \frac{1}{(2\pi)^{3/2}} \int \frac{1}{\sqrt{2\omega}} \left[ \sum_{s=1}^{2} b_s(k)w_s(k) e^{-i\omega t} + \sum_{s=3}^{4} d_s^\dagger(k)w_s(k) e^{i\omega t} \right] e^{ikr} d^3k
\] (3.155)

\[
\psi(x) = \frac{1}{(2\pi)^{3/2}} \sum_{s=1}^{2} \int \frac{1}{\sqrt{2\omega}} \left[ b_s(k)u_s(k) e^{-i k \cdot x} + d_s^\dagger(k)v_s(k) e^{i k \cdot x} \right] d^3k
\] (13.161)

• Page 460, Equation (3.155): Change \( d \) to \( b \). In Equations (13.158) and (13.159), change \( i \) to \( s \). And in Equation (3.159) add “and \( d_s^\dagger(k) = b_s^\dagger(k) \)”:

\[
\psi(x) = \frac{1}{(2\pi)^{3/2}} \sum_{s=1}^{2} \int \frac{1}{\sqrt{2\omega}} \left[ b_s(k)u_s(k) e^{-i k \cdot x} + d_s^\dagger(k)v_s(k) e^{i k \cdot x} \right] e^{ikr} d^3k
\] (3.155)

but for the negative energy solutions

\[
u_s(k) = w_s(k) \tag{13.158} \]

\[
 v_s(k) = w_{s+2}(-k) \quad \text{and} \quad d_s^\dagger(k) = b_s^\dagger(k+2) \tag{13.159} \]

[5/31/2006]

• Page 461, in the first line of Equation (13.167): Add “\( d^3x \)” on the right:

\[
H = \int \mathcal{H}(x) d^3x = \int \psi^\dagger(x) (-i \alpha \cdot \nabla + m\gamma^0) \psi(x) d^3x
\] (13.167)

[Thanks to L. Fredrickson, 6/06/2005]

• Page 463, just above Equation (13.175): Delete the word “of”:

Explicitly, break the field into two parts:
[Thanks to D. Staszak, 6/08/2005]

• Page 463, Equation (13.178): Change “\( pi \)” to the Greek letter \( \pi \):

\[
f(k) = \frac{1}{(2\pi)^{3/2}} \frac{1}{\sqrt{2\omega}} e^{-ikr}
\] (13.178)

[6/02/2005]

• Page 464, Equation (13.190): replace \( p_3 \) with \( p_1 \):

\[
 a(k_1)a(k_2)|p_1,p_2\rangle = [\delta_3(k_1-p_1)\delta_3(k_2-p_2) + \delta_3(k_1-p_2)\delta_3(k_2-p_1)] \] (13.190)

[Thanks to J. Ma and E. Nelson, 6/08/2006]
Page 466, in the line just below the first equation: Replace “a and b are have” with “a and b have”: where a are b have the algebra of a single boson and fermion mode, respectively:

[Thanks to D. Staszak, 11/20/2004]

Page 468, Equation (13.199): The second “ψ” should be upper case “Ψ”. Also, for stylistic consistency none of the equations in the Problems section should be numbered:

\[ C_{rs}(\mathbf{r} - \mathbf{r}') = \langle N_o | \psi_i^r(\mathbf{r}) \psi_j^r(\mathbf{r}) \psi_s(r') \psi_s(r) | N_o \rangle \]

[Thanks to D. Staszak, 6/01/2005]

Appendix

Page 483, Equation (A.103): the \( \phi \) in the denominator should be squared. and in Equation (A.104), on the left, delete the primes in \( Y_{ml} \):

\[ -\left( \frac{1}{\sin \theta} \frac{\partial}{\partial \theta} \sin \theta \frac{\partial}{\partial \theta} + \frac{1}{\sin^2 \theta} \frac{\partial^2}{\partial \phi^2} \right) Y_i^m(\theta, \phi) = \ell(\ell + 1) Y_i^m(\theta, \phi) \quad (A.103) \]

They are conventionally normalized on the unit sphere so that

\[ \int Y_i^m(\theta, \phi) Y_i^m(\theta, \phi) d\Omega = 1 \quad (A.104) \]

[Thanks to J. Wright, 2/12/2006]

Page 484, Equation (A.109): In the first term on the right-hand side, replace (+1) by (l + 1):

\[ \frac{d^2}{d\rho^2} \left[ \rho h_i^{(1)}(\rho) \right] = \left[ \frac{l(l + 1)}{\rho^2} - 1 \right] \rho h_i^{(1)}(\rho) + 2i(l+1)\rho \int_1^{1+i\infty} ze^{i\rho z} (1-z^2)^l dz \quad (A.109) \]

[Thanks to C. Seager, 11/16/2005]

Page 491, In the line below equation (A.146), replace “or” by “of”:

In this way we have determined the asymptotic behavior of these Bessel functions

[Thanks to N. Kugland, 5/31/2006]

Page 493, (Equation A.158). Change “\( h_i \)” to “\( h_i \)”: \[ \nabla_{q_i} = \frac{1}{h_i} \frac{\partial}{\partial q_i} \quad (A.158) \]

[Thanks to B. Fahimian, 10/25/2005]

Page 500, near the end of the first paragraph, change “an more elegant” to “a more elegant”:

is an introduction to a more elegant treatment

[Thanks to N. Kugland, 5/01/2006]
